

# Usage of ePCS Application

## Transparency Operational Report

Electronic Plantation Control System (ePCS) software integrates all business operations in the field in real time and factual so as to provide fixed data that can be used to make business analysis and decisions in depth and comprehensively. By using this application, plantation companies will more easily carry out workflow controls for major operations such as work cards, outsourcing, time sheet schedules, and machine processes to control logistics and provide management with in-depth analysis of costs and resource management.

### Prevent Ghost Workers

Ghost employees and fake workdays have significant impact on company's payroll

### Bunches Sorting

Inequalities counts of fruits between infield and mill sorting cause yield losses

### Monitor Leftover Fruits

Unmonitored leftover fruits properly cause significant losses

### Tracking Coordinate Control

Job assignment location error impacts on upkeep report and work progress

### Control Materials Usage

Uncontrolled use of fertilizer or herbicide impact on operational budget

### Business Intelligence Report

All activity reports more attractive to company's management and the company's owners

### Anticipate Delay Report

Activity reports will be received on the same day to achieve good performance

### Prevent Ghost Bunches

Ghost Bunches or fake count of fruits bunches impact on production yield
